Introduction

The Decision Support System (DSS) Extracts FY 99 Extracts V. 3.0 software provides a means of exporting data from selected **VISTA** software modules and transmitting it to a Decision Support System (DSS) database residing at the Austin Automation Center (AAC). This transfer is accomplished through a set of extract routines, intermediate files, and transmission routines. Data from **VISTA** packages is stored by the extract routines in the intermediate files, where it is temporarily available for local use and auditing. The data is then transmitted to the AAC, where it is formatted and uploaded into commercial software. After the data has been successfully uploaded into the commercial software, it is purged from the intermediate files.

This document is designed to:

- Provide DSS Teams with technical information regarding each extract.
- Detail the source from which the data element in each extract is obtained.
- Provide DSS Teams with the tools to perform additional data validation.

#727.802 -- ADMISSION EXTRACT File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the MAS Admission extract from existing **VISTA** files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. This file is intended to be used for validation purposes only. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains two nationally determined cross-references, the "AC" cross-reference on the EXTRACT NUMBER field (#2) and the "AINV" cross-reference on the SEQUENCE NUMBER field (#.01). These cross-references are used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

#727.808 -- PHYSICAL MOVEMENT EXTRACT File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the MAS Physical Movement (Transfer and Discharge) extract from existing **VISTA** files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. This file is intended to be used for validation purposes only. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains two nationally determined cross-references, the "AC" cross-reference on the EXTRACT NUMBER field (#2) and the "AINV" cross-reference on the SEQUENCE NUMBER field (#.01). These cross-references are used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

#727.817 -- TREATING SPECIALTY CHANGE EXTRACT File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the MAS Treating Specialty Change extract from existing **VISTA** files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. This file is intended to be used for validation purposes only. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains two nationally determined cross-references, the "AC" cross-reference on the EXTRACT NUMBER field (#2) and the "AINV" cross-reference on the SEQUENCE NUMBER field (#.01). These cross-references are used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

#727.806 -- DENTAL EXTRACT File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Dental extract from existing **VISTA** files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. This file is intended to be used for validation purposes only. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains two nationally determined cross-references: the "AC" cross-reference on the EXTRACT NUMBER field (#2) and the "AINV" cross-reference on the SEQUENCE NUMBER field (#.01). These cross-references are used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

#727.819 -- IV DETAIL EXTRACT File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Pharmacy IV extract from existing **VISTA** files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. This file is intended to be used for validation purposes only. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains two nationally determined cross-references: the "AC" cross-reference on the EXTRACT NUMBER field (#2) and the "AINV" cross-reference on the SEQUENCE NUMBER field (#.01). These cross-references are used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

Using the DATE and the patient pointer (DFN) stored in the PATIENT NO. - DFN field (#4) in the IV DETAIL EXTRACT file (#727.819), a call is made to the Scheduling API, OUTPTTM^SDUTL3. The API returns the team's internal entry number and name from the TEAM file (#404.51). Only the pointer (IEN) to File 404.51 is transmitted.

#727.813 -- LABORATORY EXTRACT File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Laboratory extract from existing **VISTA** files. Entries into this file are made by extracting data by two different methods depending upon whether or not LMIP codes are used. Using LMIP codes, the data are extracted, in large part, from the WKLD LOG file (#64.03) which is populated by a routine provided by the Laboratory development team. Not using LMIP codes, the data are derived from several Lab files as well as from several other **VISTA** files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. This file is intended to be used for validation purposes only. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains two nationally determined cross-references: the "AC" cross-reference on the EXTRACT NUMBER field (#2) and the "AINV" cross-reference on the SEQUENCE NUMBER field (#.01). These cross-references are used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

Field # and Name	Description	Technical Description
727.813,.01 SEQUENCE NUMBER	The record number for this extract entry.	The internal entry number (IEN) for this record. This entry is DINUMed. NOTES: XXXX--CAN'T BE ALTERED EXCEPT BY PROGRAMMER
727.813,1 YEAR MONTH	A six character numeric string representing the year and the month for which this extract was performed.	Format is YYYYMM; Year 2000 compliant per vendor.
727.813,2 EXTRACT NUMBER	The corresponding entry in the DSS EXTRACT LOG file (#727) for this extract.	A pointer to the DSS EXTRACT LOG file (#727). The primary purpose is to pick up the header for the mail message.
727.813,3 FACILITY	Identifies the facility for this extract record.	An indicator of the division where this event happened. Using the NAME field (#.01) pointer from the DSS EXTRACTS file (#728), FACILITY is derived from the STATION NUMBER field (#99) for that pointer number in the INSTITUTION file (#4).

#727.81 -- PRESCRIPTION EXTRACT File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Pharmacy Outpatient (Prescription) extract from existing **VISTA** files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. This file is intended to be used for validation purposes only. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains two nationally determined cross-references: the "AC" cross-reference on the EXTRACT NUMBER field (#2) and the "AINV" cross-reference on the SEQUENCE NUMBER field (#.01). These cross-references are used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

#727.826 -- PROSTHETICS EXTRACT File Data Definition

This file contains the data elements as specified by the Decision Support System (DSS) Program Office for the Prosthetics Extract from existing **VISTA** files. Entries into this file are made by extracting data that originates in the Prosthetics RECORD OF PROS APPLIANCE/REPAIR file (#660). Information respective to the patient for which Prosthetic information is extracted is pulled from the PATIENT file (#2). Once the extracts (making up the records in this file) are approved by the extract manager, entries in this file are loaded into mail messages and transmitted to the commercial vendor. This file is intended to be used for validation purposes only. Entries in this file should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross references are deemed necessary to support validation; however, this file contains three nationally controlled cross references which are essential to the proper functioning of the Prosthetics Extract.

- "AINV" and "B" are on the SEQUENCE NUMBER field (#.01) and are required to look up and sort the entries in this file in ascending and descending order.
- AG is on the DATE OF SERVICE (#8), AMIS GROUPER (#32) PCE CPT/HCPSC CODE (#14) fields and is used to report the date range HCPSC report and bulletin.

This file should *not* be modified directly using VA FileMan.

#727.814 -- RADIOLOGY EXTRACT File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Radiology extract from existing **VISTA** files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. This file is intended to be used for validation purposes only. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains two nationally determined cross-references: the "AC" cross-reference on the EXTRACT NUMBER field (#2) and the "AINV" cross-reference on the SEQUENCE NUMBER field (#.01). These cross-references are used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

#727.811 -- SURGERY EXTRACT File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Surgery extract from existing **VISTA** files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. This file is intended to be used for validation purposes only. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains two nationally determined cross-references: the "AC" cross-reference on the EXTRACT NUMBER field (#2) and the "AINV" cross-reference on the SEQUENCE NUMBER field (#.01). These cross-references are used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

#727.824 -- LAB RESULTS EXTRACT File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Laboratory Results extract from existing **VISTA** files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. This file is intended to be used for validation purposes only. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains two nationally determined cross-references: the "AC" cross-reference on the EXTRACT NUMBER field (#2) and the "AINV" cross-reference on the SEQUENCE NUMBER field (#.01). These cross-references are used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.
